

Inter-agency Wild Bird Avian Influenza Survey Update

A report of samples collected and tested as of January 28, 2025

PLEASE NOTE: The data displayed in the following report are the most recent AIV **PRELIMINARY** test results provided to the CWHC by participating program partners unless otherwise stated. All survey numbers are displayed for the current calendar year.

DEAD BIRD SURVEY 2025

Region	January 15-28, 2025		Year to Date			
	Tested	Matrix Positive*	Tested	Matrix Positive*	H5 Positive*	H7 Positive*
British Columbia	0	0	0	0	0	0
Alberta	32	7	70	16	14	0
Saskatchewan	4	0	8	0	0	0
Manitoba	6	0	6	0	0	0
Ontario	57	30	110	66	67	0
Quebec	11	3	17	3	3	0
New Brunswick	0	0	1	0	0	
Nova Scotia	24	2	37	2	0	0
Prince Edward Island	0	0	1	0	0	0
Newfoundland & Labrador	0	0	0	0	0	0
Yukon Territory	0	0	0	0	0	0
Northwest Territories	1	0	4	0	0	0
Nunavut	0	0	0	0	0	0
Total	135	42	254	87	84	0

Number of birds tested and number matrix PCR positive* since January 1, 2025

* Matrix positive includes all birds that tested 'not negative' by PCR for one or more Influenza A viruses. The number of positive test results included both those birds that tested POSITIVE (Ct value less than 36) and those that had an INCONCLUSIVE test result (Ct value greater than or equal to 36).

For confirmed presence of High Pathogenic Avian Influenza (HPAI), subtype H5N1 and H5N5, please visit the CFIA dashboard. You can visit the dashboard here: [CFIA Dashboard](#)

Any samples found to be matrix POSITIVE or INCONCLUSIVE are then tested by PCR for H5 and H7 strains at the regional level. Any samples that are then found to be either H5 or H7 POSITIVE or INCONCLUSIVE are immediately sent to the NCFAD for confirmation and identification. Authorities from the province or region where the bird was sampled will be notified when preliminary H5 or H7 positive results are found at the regional lab. When the CFIA confirms and identifies the virus, authorities from across the country will be notified. This update reports all POSITIVE or INCONCLUSIVE **PRELIMINARY** matrix results unless otherwise stated.

Tested - The number of birds that were screened for avian influenza virus by real time reverse transcriptase PCR (RRT-PCR) for the M1 gene.

Matrix positive - The number of birds that tested positive for the M1 gene by RT-PCR.

H5 positive - The number of birds that tested positive for the H5 virus subtype by RT-PCR.

H7 positive - The number of birds that tested positive for the H7 virus subtype by RT-PCR.

HPAI - Confirmed at the CFIA NCFAD laboratory to be positive for highly pathogenic avian influenza through virus isolation or sequencing.
